

## DFARS Workshop Service

Are you ready for the DFARS Deadline?

The Department of Defense requires all contractors and subcontractors to adequately safeguard Covered Defense Information (CDI) and rapidly report Cyber Incidents. The deadline for compliance to these requirements is **December 31, 2017**.

G2OPS DFARS Workshop Service identifies how an organization stores, processes, and transmits CDI. Our Two-Day Workshop leads us to learn the flow of CDI throughout an organization's day-to-day business processes.

We then measure the organization's compliance posture concerning DFARS cybersecurity requirements (NIST 800-171 r1 and other relevant standards). Because we rate compliance with each individual requirement, we reveal strengths and weaknesses of the organization before the deadline.

G2OPS creates and delivers key documentation for our clients, ensuring they're prepared for DFARS Cybersecurity inquiries by the government, a prime contractor, or DCMA. Our deliverables focus on providing clear understanding of an organization's existing compliance posture (Matrix & SSP) and a prioritized list of mitigation strategies (POAM) that guide an organization to full compliance.

G2OPS draws upon our vast experience working with DoD and Federal Government, in addition to our combined Cybersecurity expertise to deliver value through trusted services and build security partnerships with our clients.

### SERVICE DELIVERABLES

- DFARS Compliance Matrix
- System Security Plan (SSP)
- Plan of Actions and Milestones (POAM)

.....  
*Choose G2OPS as your Cybersecurity Partner*

G2OPS focuses on outcomes that position our clients to become compliant with DFARS Cybersecurity Requirements, to improve security programs, and to reduce risk for financial loss, brand damage, and business interruption.
