

Cybersecurity Services

Who We Are

G2 Ops, Inc. (G2 Ops) recognizes the necessity to protect sensitive information while executing business. G2 Ops applies the expertise and experience of our professionals, drives innovation via disciplined process-based execution and delivers excellent customer service as the foundation to developing long-term cybersecurity partnerships with our clients. G2 Ops provides services to the federal government, commercial clients, city and state governments, and colleges and universities.

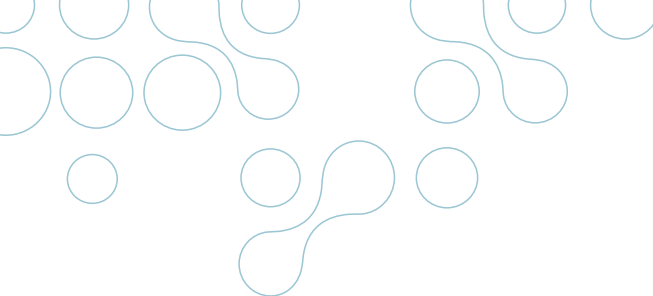

Our Services Objective

G2 Ops partners with clients to provide strategic and tactical cybersecurity consulting services, define clear governance to establish a sound security program, deliver operational guidance and verify organizational security posture. In addition to bringing our proven cybersecurity expertise, G2 Ops leverages Model-Based Systems Engineering (MBSE) and advanced analytics to measure risk and prioritize remediation efforts. Our services have delivered value to Department of Defense clients, as well as a wide range of public and private sector businesses and higher education organizations.

Protecting Your Critical Assets

Cyber activism, cyber crime and cyber espionage are threats. All organizations face a multitude of threats and threat actors desiring to gain unauthorized access to sensitive data such as IP, PII, CDI/CUI or PHI. Today's threat landscape demands greater diligence in determining relevant risk to the organization, and enabling security controls to prevent, detect and respond to cyber threats.

When IT organizations fail to prevent or detect breaches, it's commonly due to evasion of existing controls, insufficient funding, lack of in-house expertise or lack of third-party vetting, according to a 2014 Ponemon Institute study. It is imperative that organizations continuously evaluate their existing cybersecurity programs (people, processes and technology) to ensure their security posture remains vigilant in the battle against these cutting-edge threats.

Our Proven Methodology

The G2 Ops methodology incorporates years of cybersecurity experience in government and private sector. G2 Ops follows an established process to learn about your organization, determine your strategic goals and assess your existing environment.

We deliver a strategic security roadmap that includes a gap analysis in addition to a prioritized layout of short-, mid- and long-term recommendations to align your investment with your organizational security goals, resulting in outcomes that enable an agile business model while protecting brand reputation, sensitive data and financial health.

G2 OPS METHODOLOGY

Security strategy for today and tomorrow, and evaluate existing people, process and technology

Compare existing controls against industry or regulatory requirements

Develop remediation strategies based on impact to business operations

Partner with clients to guide execution of the Strategic Security Roadmap
