

DFARS Workshop Service

The DFARS Deadline has passed; do you meet compliance requirements?

The Department of Defense requires all contractors and subcontractors to adequately safeguard Covered Defense Information (CDI) and rapidly report Cyber Incidents. The deadline for compliance to these requirements was **December 31, 2017**.

G2 Ops draws upon our vast experience working with DoD and Federal Government. In addition, our combined cybersecurity expertise allow us to deliver value. These trusted services ultimately build long-term security partnerships with our clients.

G2 Ops DFARS Workshop Service identifies how an organization stores, processes, and transmits CDI. Our Workshop(s) lead us to learn the how CDI flows throughout an organization’s day-to-day business processes.

We then measure the organization’s compliance posture concerning DFARS cybersecurity requirements (NIST 800-171 r1 and other relevant standards). Because we rate compliance with each individual requirement, we reveal organizational strengths and weaknesses, helping set a path forward even though the deadline has passed.

G2 Ops creates and delivers key documentation for our clients, ensuring they’re prepared for DFARS Cybersecurity inquiries by the government, a prime contractor, DSS or DCMA. Our deliverables focus on providing clear understanding of an organization’s existing compliance posture (Matrix & SSP) and a prioritized list of mitigation strategies (POAM) that guide an organization to full compliance.

SERVICE DELIVERABLES

- DFARS Compliance Matrix
- System Security Plan (SSP)
- Plan of Actions and Milestones (POAM)
- Incident Response Plan

.....
Choose G2 Ops as your Cybersecurity Partner

G2 Ops focuses on outcomes that position our clients to become compliant with DFARS Cybersecurity Requirements, to improve security programs, and to reduce risk for financial loss, brand damage, and business interruption.
