

Capabilities Statement

G2 Ops, Inc. (G2 Ops) provides leading-edge systems modeling, systems engineering, cybersecurity, cloud engineering, and strategic support & innovation solutions. Our solutions-based modeling, analysis, development, and quality management drive innovation and process advancement.

Company Facts

Certification

Women-Owned Small Business

SBA Certified:
Women's Business Enterprise (WBE)

Classification Code:

NAICS 541330,
541715, 541519,
541990

Cleared Facilities:

- Arlington, VA
- Virginia Beach, VA
- San Diego, CA

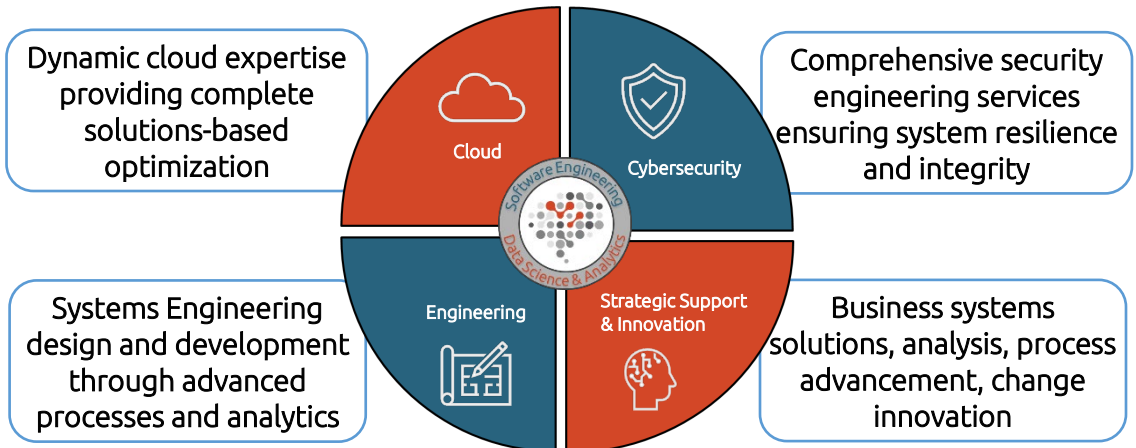

Inc 5000 Fastest Growing Company

2018 - 2022

Cloud – We are a managed service provider of Amazon AWS and Microsoft Azure, providing comprehensive solution sets including brokerage support, architecture solutioning, engineering, cybersecurity, and technical support from concept through deployment and sustainment.

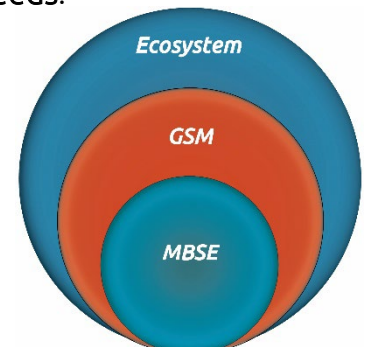

Systems Engineering - We are an industry leader in MBSE with 10-plus years of experience applying modeling tool suites and methodologies to optimize complex engineering activities.

Cybersecurity - We provide experienced cybersecurity services and threat-based analytical products to identify and mitigate cyber risk for integrated mission-critical Systems-of-Systems.

Strategic Support - We deliver critical process maturation support, analysis, and improvement implementation designed to advance efficiency, functionality, and responsiveness across the full spectrum of business operations.

The Gold Standard Methodology™ and its developmental ecosystem streamlines innovation and change, data collection, analysis, and quality management. It is based on a three-layer system that simulates and captures unique solutions to our customers' complex business needs.

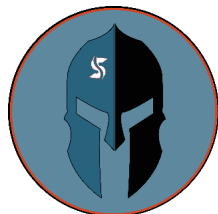

- Integrates disparate MBSE models to benefit customer needs
- Drives common model schema to rapidly mature Systems Engineering automation tools - enabling compatibility with G2 Ops analytic tools and capabilities
- GSM Ecosystem fosters development and continual improvement of software applications – ensuring all clients have access to the best of G2 Ops' award-winning innovative solutions

Small Business Innovative Research & Software Products

Software-based problem-solving tools designed to identify mission-critical risks / vulnerabilities before exploits can occur. These advanced early warning tools provide advanced analytics for making real-time decisions.

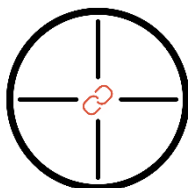

SOFIA – Leading edge, Mission-Based Cyber Risk Assessment tool

IRIS – One-of-a-kind cyber analysis tool evaluates overall system resilience and prioritizes critical infrastructure defense

ECR/TAS – Cybersecurity attack simulator that evaluates asset exploitability

ARIE – Repeatable integration process streamlining installation and interfacing of tactical data systems

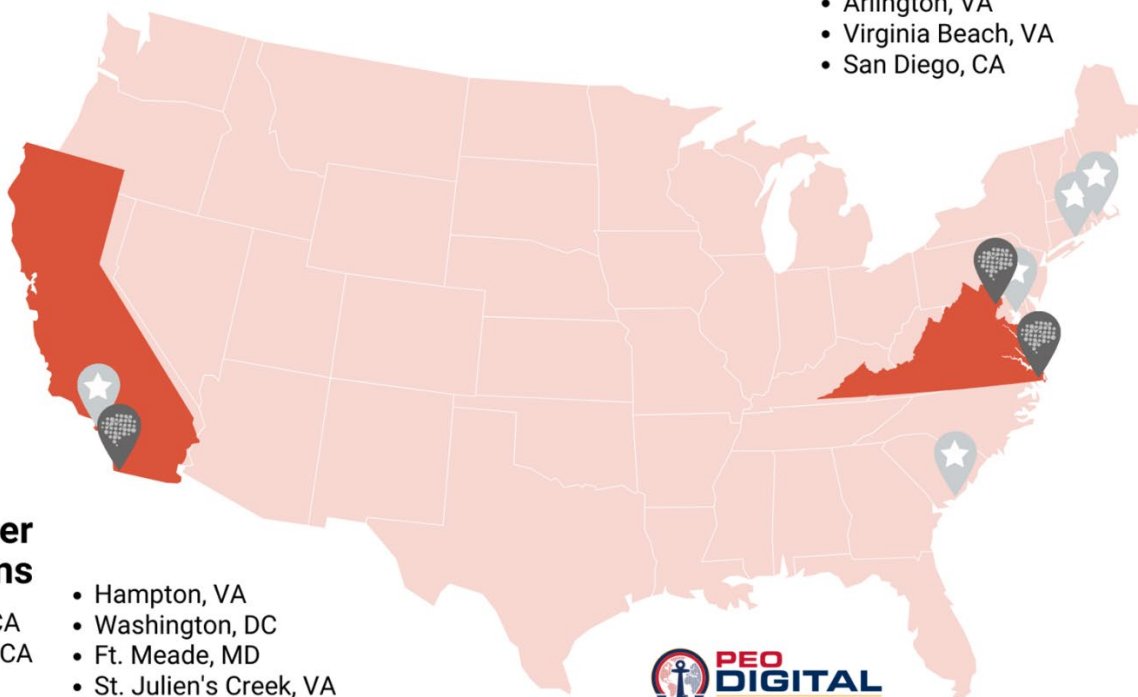

SEADES – Enables multi-platform data alignment for data analytics and assimilation

G2 Ops has coast-to-coast national reach with a presence collocated with key decision-makers. Our three (3) accredited, fully secured Labs employ full connectivity for real-time collaboration.
