### From the Director Risk-Based Due Diligence

O ur attention has been focused on the implementation of the SBIR/STTR Due Diligence Program required by the SBIR and STTR Extension Act of 2022. Congress has directed that no later than 1 July 2023 all federal SBIR/STTR programs will have a risk-based due diligence process in place or no awards may be made. According to the act:

As a result of the SBIR and STTR Extension Act of 2022 (Public Law 117-183), hereafter referred to as the Extension Act, the Small Business Act (15 U.S. Code § 638)

Robert L. Smith, director DoN SBIR/STTR

was amended to require the following of each Federal agency participating in the SBIR or STTR programs:

(1) establish and implement a due diligence program to assess security risks presented by small business concerns seeking a federally funded award.

(2) assess, using a risk-based approach as appropriate, the cybersecurity practices, patent analysis, employee analysis, and foreign ownership of a small business concern seeking an award, including the financial ties and obligations (which shall include surety, equity, and debt obligations) of the small business concern and employees of the small business concern to a foreign country, foreign person, or foreign entity.

Per the legislation the department is precluded from making an award if any of the following conditions exist:

In accordance with the Extension Act, the Department of Navy (DoN) will not make an award under the SBIR or STTR program if it is determined that:

(A) the small business concern submitting the proposal

(i) has an owner or covered individual that is party to a malign foreign talent recruitment program;

(ii) has a business entity, parent company, or subsidiary located in

Department of the Navy SBIR/STTR Transition Program Transitions Newsletter 2023 Fall Edition

### DISTRIBUTION A. Approved for public release - distribution unlimited. 0543-950-23

the People's Republic of China or another foreign country of concern; or

(iii) has an owner or covered individual that has a foreign affiliation with a research institution located in the People's Republic of China or another foreign country of concern; and

(B) the relationships and commitments described in clauses (i) through (iii) of subparagraph (A)

(i) interfere with the capacity for activities supported by the Department of Defense to be carried out;

(ii) create duplication with activities supported by the Department of Defense;

(iii) present concerns about conflicts of interest;

(iv) were not appropriately disclosed to the Department of Defense;

(v) violate Federal law or terms and conditions of the Department of Defense; or

(vi) pose a risk to national security.

This doesn't mean we are not allowing companies to participate in the SBIR/STTR program; it means we have to look at the risk elements. We look at the things listed above and determine if they adversely affect any of the companies working with us, because if it can't be mitigated, we can't make it work. If in some cases a company has money from a foreign-aligned country-China, North Korea, Russia or Iran-by law, we cannot make an award to them. If you are a young firm, know the origins of the venture capital you plan to take. If it is coming from the wrong place, you may never be allowed to work with the federal government. Also, follow the instructions! From what I've heard from other agencies, there's quite a rejection rate because companies are not following the due diligence related instructions in recent solicitations. Even if companies don't have investments from a foreign government, they still must complete the forms.

The risk-based due diligence program does not only apply to the Navy, but to all federal agencies.

We are working on implementing this program and working on the SBIR 23.2 BAA. The risk-based due diligence process is part of the solicitation instructions. We hope to make this process as easy as possible on the company, but there are extra mandatory forms to fill out. If the company does not fill these forms out, we have to reject them.

We are looking to see what companies are doing for their cyber hygiene. Do they need to be as competent as a national security agency? No, but there are some fundamental things they need to do to protect their intellectual property, which is also protecting the Navy's investment in their intellectual property. Are companies taking appropriate cybersecurity steps? That's what we are really looking for and, if not, they need to improve it. It may be as simple as using software to protect the business or even pulling out hard drives at the close of the business day. Companies don't need to spend millions of dollars to have cyber security; they just have to be smart about what they do and proactive on how they do it. For information about cybersecurity and controlled unclassified information (CUI) awareness resources and opportunities, check out the Navy SBIR/STTR cybersecurity page here: https://www.navysbir.com/ cyber.htm. P.S. Blue Cyber resources are free!

We continue to look for ways to make the business of innovation easier and faster. We did yesterday, we do today, and we will tomorrow. I encourage businesses to look at open topics and participate in future solicitations, both traditional and open.

We are really excited about the cohort that signed up for the latest Navy STP class. See the list of companies on page 10. About half the companies are new to Navy STP, so that's pretty exciting. The word is getting out. People are understanding the value of Navy STP. When these companies succeed, the Navy succeeds.

We will continue to do what we do well and stay on course, on speed, always looking for ways to make it easier for all while we work at accelerating delivery of solutions to our warfighters.

Sincerely,

Nott -

Robert L. Smith Director DoN SBIR/STTR

### **Evaluating Cyber Risk: G2 Ops' Tools and Methodologies Enhance** Navy Capabilities

By Jennifer Reisch, Navy STP Managing Editor

Collaboration is essential for Phase III transitions," said Kevin Esser, chief business officer at G2 Ops. "Collaboration spanning the program office that needs the technology, the contracting organization—whether that's NAVSEA, GSA, NAVAIR or another command, and the small business itself." Esser has successfully transitioned two out of four Phase II SBIR technologies to the Navy. A third SBIR project, still in Phase II, has already transitioned portions of the technology. "A lot of companies don't think about that collaborative requirement. It might be that they don't have the resources or the know-how to collaborate with the Navy to construct a workable Phase III vehicle."

G2 Ops uses model-based systems engineering (MBSE) to address systems engineering and cybersecurity challenges. The company develops and applies modeling tools and analytics to improve systems engineering and uncover cyber strengths and weaknesses in tactical system design.

The first technology G2 Ops transitioned to the Navy was Strategic Optics for Intelligent Analytics (SOFIA), a mission-based cyber risk assessment tool, developed in collaboration with PEO Integrated Warfare Systems (IWS) 1.0, the developers of AEGIS Combat Systems. "What made this so special was that we were already working with the Navy in both model-based systems engineering and risk management, and the need spelled out in their SBIR program spanned the two areas that we were working on independently," explained Corren McCoy, PhD, chief data strategist at G2 Ops. "It was an opportunity for us to bring two of our areas of expertise together into one solution. IWS 1.0 and NAVSEA are really trying to be forward leaners in digital engineering."

G2 Ops' ability to leverage existing work proved attractive to the Navy. "I think the fact that we had a structured and known approach that followed the Navy SOP for risk management gave them confidence that what we could deliver would be a sound solution," McCoy said. The name Sofia is derived from the Greek word for wisdom. "That's what we're providing here: insight into the cyber posture of a tactical platform and the impact of cyber vulnerabilities on mission-based risk.

Classical risk assessments focus on the component level, which does not give a true operational picture of where risk really resides. The beauty of this tool is that the systems modeling language models we create of the baseline architectures flow into a hierarchy that allocates components to the systems and missions they support. The digital engineering models give layered context to the way that a platform operates: not just its physical attributes, but its behavioral attributes—how they interrelate, downstream impact—and then risk-scored through an overlay against open-source intelligence data that we collect."

For SOFIA, G2 Ops established a data pipeline encompassing over a dozen open-source intelligence databases. This pipeline provides cybersecurity engineers with ready access to data that is typically constrained due to concerns that open-source intelligence can resemble malware and trigger protection mechanisms on Navy networks. G2 Ops scrubs and associates the data with the attack surface, creating a clean repository for risk scoring at various levels using SOFIA's algorithms and hardware and software descriptions in the system models. The resulting risk assessments can be applied to missions, offering a customizable approach to mission risk assessment and quantifiable reduction in known cyber vulnerabilities, McCoy explained.

"The company was founded primarily as an engineering services provider," Esser said. "But we started creating reusable tools to help our customers with applied digital engineering work

to take the technologies to NAVSEA, which had

just established a new directorate to manage digital

engineering and cybersecurity. They awarded us a

Phase III and now we're applying the tool suite and

methodologies to NAVSEA's new cloud brokerage and a cybersecurity system they're building called

Esser continued, "The ECR suite was created with

an airframe in mind, but it can be used to evaluate

the cyber posture of any system, whether an

Evaluating Cyber Risk: G2 Ops' Tools and Methodologies Enhance Navy Capabilities... Continued

and intensive kinds of cyber analytics projects. It was at that point that we started looking at the SBIR program as a way to bring to life some of the capabilities that we were building. I use the term 'little i' innovation for what we were doing internally, and turning it into 'big I' innovation: formally funded capabilities with a Navy sponsor."

SOFIA was G2 Ops' first SBIR contract award. "The experience we've had with PEO IWS and the support we received allowed us to be innovative and bring the idea to life. We started to look at

other opportunities as well and ended up winning a Phase II Air Force SBIR through a pitch day competition. The Commercial **Derivative Aircraft** Division, CDAD, was looking for a way to baseline their systems, the airframe, the interactions between them. and to do creative cyber analytics to understand the

SABER."

enterprise network, a cloud environment or even a single component. And because ECR is comprised of digital engineering tools and capabilities, the attack simulation can be an iterative process. As they make design decisions, we can help them understand, 'Yes, that was a good change, or no, it wasn't. You should consider this instead.'"

Fall 2023

cyber posture of the entire platform. There are so many different systems, each with different attributes and capabilities, and they needed to understand the impact of different threat factors/ vectors on the platform as a whole," Esser said.

"As a part of that Phase II effort for the Air Force, we created the Embedded Cyber Resiliency (ECR) tool suite. This included novel digital engineering modeling as well as new scripting capabilities that make it easier to ingest and output data. Then we came up with different ways to look at cyber vulnerability and a framework to evaluate vulnerability at the platform level. When we completed that Phase II, the Air Force didn't have an immediate path to Phase III. We got permission

G2 Ops was founded a decade ago. "The founders all had Navy-related backgrounds and wanted to build a company that was going to be fun to work at. It may sound silly, but among the three founders, we'd all worked at 20 different organizations and we had an idea what the culture of a dynamic place to work would look like. We wanted to do important work for the Navy, to offer services that other companies were not providing, and to create a workplace people wanted to be a part of, where they could grow and develop their technical expertise. That's really what G2 Ops is," Esser explained.

"When we started in 2013, the Navy was embarking on a digital engineering transformation. Evaluating Cyber Risk: G2 Ops' Tools and Methodologies Enhance Navy Capabilities... Continued

Navy better."

explained.

We saw that organizations across all the SYSCOMs were having a hard time making the transition; they didn't understand the benefits, or how to get started. We wanted to help the Navy understand why digital transformation is important, and how it would benefit both the acquisition community and the warfighter—the end user. That's been a big part of our success: We have picked up the hard problems and helped find solutions to them."

The company has experienced remarkable growth,

reaching 170 employees, and has been recognized as one of the fastest-growing companies in the United States by Inc. 5000 for six consecutive years.

"It's a business truism that if you're not growing, you're dying," said Esser. "As soon as you win a contract, it's expiring. You

understand because you can touch them. Since evaluating cyber risk is something you can't touch, we strive to give the Navy tools for repeatable quantifiable processes that give them confidence in how they are reporting, either up vertically, or laterally. think that's

have one, two, maybe five years, and then you have to either go win it again or win something else. That being said, growth is not a singular purpose. Growth shows that you're expanding; you're providing more capability. We also think of it as building the foundation underneath the feet of our employees. That growth pace is indicative of how hard we have worked to build a foundation for our employees. Bringing in the absolute best possible people we can, and making them want to stay, is really important. Dr. McCoy is a great example. You need to surround yourself with fantastic people and you need to build an environment where people want to stay. That is a benefit to the Navy, to our customer base. When people want to stay, that institutional knowledge continues to grow and it

the importance of having solutions like SOFIA and our ECR suite, because without them, you're just looking at a lot of data and you can't make any sense of it. We're trying to make sense of the information in a way that can be understood at every level, so everyone gets the same picture of where the risk lies."

makes us better. And then we can help make the

Understanding the cyber posture of platforms is crucial, and the company's tools and methodologies

provide a quantifiable and repeatable process for evaluating and reporting on cyber risk, McCoy

"A lot of Navy technology consists of physical things that are fabricated. They're easier to

### The DoN CISO's Blue Cyber Initiative Supports DoN SBIR/STTR Small Businesses on Their Cybersecurity Journeys

By Kimberly Rouleau, Technical Writer

Funded by the DoN's Small Business Innovation Research (SBIR) Program, the DoN Chief Information Security Officer's Blue Cyber Initiative is a resource to support small business contractors on their cybersecurity journey. The DoN CISO's Blue Cyber education series is an early partnership with the defense industrial base (DIB) that enables small businesses to bake-in cybersecurity and move forward at the speed of innovation. Pairing small businesses with the most modern cyber protection methods in the industry better positions DIB small businesses to protect sensitive information and networks just as soon as they have a contract to innovate for the DoN.

Kelley Kiernan is the founder, CTO, and director of the Blue Cyber initiative. She works for Bob Smith, the DoN SBIR/STTR director. "The mission of Blue Cyber is very simple: to ensure that no Department of Navy contractor or potential contractor has any cybersecurity or information protection questions," Kiernan said. "A small business's cybersecurity journey includes things like protecting your intellectual property, because all Phase II SBIR/STTR firms are generating intellectual property. And, as you generate intellectual property on a government contract, that becomes controlled unclassified information. Small businesses want to protect their intellectual property. The DoN wants to protect controlled unclassified information. We all have the same goals. businesses must have the robust cybersecurity required by their contracts in place when the contract begins."

The Blue Cyber Initiative supplies small businesses with resources to support them on their cybersecurity journey. All Blue Cyber events are free and open to the public. The Blue Cyber website features 40 free modules on cybersecurity and information protection. Kiernan offers Cybersecurity Ask-Me-Anything webinars every Tuesday at 1 p.m. Eastern and a monthly cybersecurity boot camp. Once a month, Kiernan hosts a webinar which covers the 15 security requirements in the FAR 52.204-21 that make up basic cyber hygiene for small businesses. Additionally, Kiernan offers office hours with SBIR/STTR and U.S. small businesses to answer questions and connect them with resources. The Blue Cyber Initiative website and link to sign up for office hours can be accessed here: https://www.safcn.af.mil/CISO/Small-Business-Cybersecurity-Information/. Small businesses can sign up for Blue Cyber webinars and boot camps at SBIR. gov at this link: www.sbir.gov/events.

Kiernan summarized the purpose of DoN CISO's Blue Cyber Initiative: "We must match the aggressiveness of our cyber adversaries with radical teamwork to bring our small businesses up to speed in the most modern methods for comprehensive protection of DoN sensitive data and networks."

"Our adversaries and cyber criminals are phishing our U.S. small businesses at an astounding rate. There are many basic protections to help a small business secure its livelihood against cybercrime," Kiernan said. "These

## Navy STP Adds Prime Liaison Position to Foster Transition Opportunities Between Small Businesses and Defense Primes

By Jennifer Reisch, Navy STP Managing Editor

The ultimate goal of the Navy SBIR Transition Program (Navy STP) is to support participating small businesses to transition their technology to a follow-on Phase III contract, delivering capability to warfighters. That Phase III contract could come from a Navy program office or a defense prime contractor. With the goal of transition in mind, Navy STP added a prime liaison role to the program during the past cohort year.

The prime liaison works with defense prime contractors to understand their requirements and the capability gaps that must be solved to increase warfighting capability, reduce sustainment costs on current program of record contracts, and address market adjacency requirements to meet future requirements.

Once the needs of the defense contractor are understood, the prime liaison works to match Navy STP small businesses' innovative technologies with prime requirements to deliver warfighting capability to the Navy.

"While the Navy STP program was really heading in a good direction, one of the gaps was someone to work more closely with all the defense prime contractors," explained Don Williamson, Navy STP's prime liaison. "While we have a team of business consultants who work with all of our small businesses to provide coaching, training, and mentoring, I was hired to develop and enrich relationships with the defense primes."

The prime liaison attends all Navy STP Showcase events and other Navy community tradeshows and industry events. This direct contact with primes stimulates collaboration and a positive working relationship with them. "Big commercial trade shows are great venues to meet a lot of the prime representatives," Williamson explained.

"I'm looking for what the primes need in three areas: gaps in current programs of record, such as more

A representative from Raytheon Technologies meets with a small business participating in the Navy STP.

fighting capability gaps that the primes identify; opportunities to lower sustainment costs; and emerging technology needs."

Williamson generally reaches out to three different groups within the primes. "Almost always my first contact is with contracting people; that's typically where the small business office and the small business contracts reside in their supplier diversity or supplier teams. And those folks are absolutely great. They really know a lot about the SBIR program."

Next Williamson reaches out to product line program managers and engineering managers. "Those are the people who understand the gaps in their programs or a capability that they're trying to add. I'm trying to get to the technical people who have the actual need for emerging technology that can be solved by our small businesses."

Third, some defense primes have their own science and technology or advanced development groups looking for emerging technologies. "Those people are looking down range further, and they can be very helpful in looking for earlier development from small businesses with lower TRLs," he said. Navy STP Adds Prime Liaison Position to Foster Transition Opportunitiess... Continued

"Typically after I develop initial points of contact, Paul Cole, who is the Navy STP program manager, Eric Patten, our business consultant team lead, and I will get on a phone call with the prime and share an overview of the Navy STP program, the Navy STP website and the Navy STP Virtual Transition Marketplace. I think it's fair to say that all the primes that we've dealt with so far have heard of the SBIR prime and one or more of the small businesses from our current cohort. We had TIMs with one defense prime that was a three-hour block with six small businesses presenting. The prime had their corporate people and business units participate on the call the entire three hours, and then in 30-minute blocks each small business presented. Most of our calls have been between a prime and just one small business.

program but very few of them had heard of Navy STP and perhaps only one or two had ever seen or used the Navy STP VTM. I would say every conversation we've had has been very well received. They think the Navy STP program we have is phenomenal and they've been very impressed with the maturity of the VTM."

Primes that supported the 2022-2023 cohort include:

- Lockheed Martin
   Corporation
- The Boeing Company
- Raytheon Technologies
- Northrop Grumman
- BAE Systems
- General Dynamics
- L3Harris Technologies
- Huntington Ingalls Industries

Williamson has organized technical interchange meetings (TIMs) with several primes. "In a TIM we set up and facilitate a conversation between a defense

A representative from Sikorsky, a Lockheed Martin Company, discusses innovative Navy Technology with Navy STP participants.

Always our goal is to match up a prime with a small business to help lead to that transition, to find pathways for these small business transitions."

Williamson finds his work very fulfilling. "It's very rewarding for me to see some of these small businesses find successful pathways given my Navy background, and I'm a huge advocate of small businesses. I think the small businesses really appreciate our advocacy on their behalf."

In the current year, the prime liaison will hold quarterly visits with

primes and quarterly TIMs between primes and participating small businesses. "With time, I think we'll be even more successful in getting more transitions," Williamson said.

For more information on Navy STP and participating small businesses, visit the Navy STP VTM at <a href="https://wtm.navyfst.com/">https://wtm.navyfst.com/</a> or the Navy STP website at <a href="https://navystp.com/">https://navystp.com/</a>.

# First Look: A Snapshot of This Year's Navy STP Participants

The following pages provide a first look at the innovative Phase II companies currently enrolled in the Navy SBIR Transition Program (Navy STP). The companies are listed by SYSCOM in alphabetical order, under Office of the Secretary of Defense Communities of Interest (CoI) categories most appropriate to their technology. If you see something of interest and want to know more, please contact the company directly. Corporate information and technology quad charts, abstracts, thumbnail descriptions, and company capability brochures for the companies listed below will be available through the Navy STP Virtual Transition Marketplace (Navy STP VTM) online database of innovative Phase II SBIR/STTR technologies in December 2023. You can access the VTM at: <u>https://vtm.navyfst.</u> com/.

Small businesses will present their technologies at one Navy STP Showcase or Technical Information Exchange: WEST 2024, to be held Feb. 13-15, 2024, in San Diego; the NAVAIR and NAVSEA Technical Information Exchange, to be held March 12-13, 2024, in Washington; or Sea-Air-Space 2024, to be held Apr. 8-10, 2024, in National Harbor, Maryland.
